

Phoebe C. Achonwa

(510) 935-5462 - pachonwa6@gmail.com - Portfolio - GitHub - LinkedIn

EDUCATION

University of California, Irvine, M.S in Electrical Engineering *September 2025 - June 2027*

University of California, Santa Cruz, B.S. in Computer Engineering *September 2018 - June 2022*

- **Relevant Courses:** Computer Systems & C programming, Introduction to Electronic Circuits, Signal and Systems, Logic Design, Computer Architecture, Advanced Programming
- **Extracurriculars:** NeuroTech (Hardware Team), CruzHacks (Sponsorship Team)
- **Achievements:** 1st place in US at NeuroTechX competition - Fall

SKILLS

Languages: Java, C, Html/Css, Python, Matlab, SQL, MIPS Assembly, Base SAS, SAS Macros

Technologies: Git, Linux, Agile, Postgres, SolidWorks/Fusion 360

Spoken/Written Languages: Fluent in English. Elementary proficiency in German and Spanish.

WORK EXPERIENCE

Industrial Light & Magic (Remote)

Technical Assistant I February 2023 - Present

- Develop python automation scripts to streamline workflow processes, reducing manual effort by 10% and improving productivity.
- Improved global resource management efficiency by overhauling tooling for forecasting and capturing compute and storage data, integrating data from Elasticsearch, MongoDB, and Oracle into PostgreSQL and Google Sheets using Python.
- Coordinated and prioritized resource distribution across multiple projects, applying principles of load balancing and system optimization.

Amazon (Seattle, WA)

Software Development Engineering Intern June 2021 - September 2021

- Increased response time efficiency for customers across 14 regions by providing cpu, disk and memory metrics.
- Developed backend using Java to create and update xml APIs, update a dynamoDB database with version bucketing and implement AWS Cloudwatch and AWS Simple Storage Service(S3).
- Created around fifteen unit tests using Mockito and JUnit to test various user inputs including edge cases.
- Participated in code reviews and provided feedback to improve code quality.

PROJECTS

Mechatronics Capstone Project (Santa Cruz, CA)

Lead Developer October 2021 - December 2021

- Designed and built an autonomous robot capable of navigating a field and completing tasks using sensors like beacon detectors, trackwire, and bump sensors.
- Led the programming of the robot's microcontroller in C, implementing event-driven logic and hierarchical state machines to manage sensor feedback and control movements.
- Assembled and soldered sensor and actuator circuits, ensuring system reliability. Designed the robot's structure in CAD and fabricated it using 3D-printed MDF plywood components.

NeuroTech (Santa Cruz, CA)

Hardware Team Member April 2019 - January 2021

- Created a speech recognition device that operates without the user needing to speak
- Worked as part of the hardware/design team to model the headset using AutoDesk Fusion 360
- Integrated and assembled all components, including the electrodes and heat shrink, to make a cohesive device
